## NAME

SYBYLAtomTypes

#### SYNOPSIS

```
use AtomTypes::SYBYLAtomTypes;
use AtomTypes::SYBYLAtomTypes qw(:all);
```

## **DESCRIPTION**

SYBYLAtomTypes class provides the following methods:

 $new,\ AssignAtomTypes,\ GetAllPossibleSYBYLAtomTypes,\ GetAllPossibleSYBYLNonHydrogenAtomTypes,\ GetSYBYLAtomTypesData,\ StringifySYBYLAtomTypes$ 

The following functions are available:

 $Get All Possible SYBYL Atom Types, \ Get All Possible SYBYL Non Hydrogen Atom Types, \ Get SYBYL Atom Types Data and the property of the pro$ 

SYBYLAtomTypes is derived from AtomTypes class which in turn is derived from ObjectProperty base class that provides methods not explicitly defined in SYBYLAtomTypes, AtomTypes or ObjectProperty classes using Perl's AUTOLOAD functionality. These methods are generated on-the-fly for a specified object property:

```
Set<PropertyName>(<PropertyValue>);
$PropertyValue = Get<PropertyName>();
Delete<PropertyName>();
```

The data file SYBYLAomTypes.csv distributed with MayaChemTools release contains all possible Triops SYBYL [ Ref 79-80 ] atom types.

Examples of SYBYL atom types:

```
C.3,C.2, C.ar, N.3, N.2, N.ar and so on
```

# **METHODS**

new

```
$NewSYBYLAtomTypes = new AtomTypes::SYBYLAtomTypes(%NamesAndValues);
```

Using specified SYBYLAtomTypes property names and values hash, new method creates a new object and returns a reference to newly created SYBYLAtomTypes object. By default, the following properties are initialized:

```
Molecule = ''
Type = 'SYBYL'
IgnoreHydrogens = 0
```

#### Examples:

## AssignAtomTypes

```
$SYBYLAtomTypes->AssignAtomTypes();
```

Assigns SYBYL atom types to all the atoms in a molecule and returns SYBYLAtomTypes.

#### GetAllPossibleSYBYLAtomTypes

Returns all possible SYBYL atom types corresponding to hydrogen and non-hydrogen atoms as an array

## GetAllPressitethesYBYLNonHydrogenAtomTypes

Returns all possible SYBYL atom types corresponding to non-hydrogen atoms as an array reference.

## GetSYBYLAtomTypesData

```
$AtomTypesDataMapRef = $$YBYLAtomTypes->GetSYBYLAtomTypesData();
$AtomTypesDataMapRef = AtomTypes::SYBYLAtomTypes::GetSYBYLAtomTypesData();
```

Returns SYBYL atom types and associated data loaded from SYBYL data file as a reference to hash with the following hash data format:

## StringifySYBYLAtomTypes

```
$String = $SYBYLAtomTypes->StringifySYBYLAtomTypes();
```

Returns a string containing information about SYBYLAtomTypes object.
