### NAME

SYBYLAtomTypes

### **SYNOPSIS**

```
use AtomTypes::SYBYLAtomTypes;
use AtomTypes::SYBYLAtomTypes qw(:all);
```

# **DESCRIPTION**

SYBYLAtomTypes class provides the following methods:

new, AssignAtomTypes, GetAllPossibleSYBYLAtomTypes, GetAllPossibleSYBYLNonHydrogenAtomTypes, GetSYBYLAtomTypesData, StringifySYBYLAtomTypes

The following functions are available:

 $Get All Possible SYBYLA tom Types, \ Get All Possible SYBYLN on Hydrogen Atom Types, \ Get SYBYLA tom Types Data and the first property of the property of t$ 

SYBYLAtomTypes is derived from AtomTypes class which in turn is derived from ObjectProperty base class that provides methods not explicitly defined in SYBYLAtomTypes, AtomTypes or ObjectProperty classes using Perl's AUTOLOAD functionality. These methods are generated on-the-fly for a specified object property:

```
Set<PropertyName>(<PropertyValue>);
$PropertyValue = Get<PropertyName>();
Delete<PropertyName>();
```

The data file SYBYLAomTypes.csv distributed with MayaChemTools release contains all possible Triops SYBYL [ Ref 79-80 ] atom types.

Examples of SYBYL atom types:

```
C.3, C.2, C.ar, N.3, N.2, N.ar and so on
```

## **METHODS**

new

```
\verb§NewSYBYLAtomTypes = new AtomTypes::SYBYLAtomTypes(§NamesAndValues);
```

Using specified SYBYLAtomTypes property names and values hash, new method creates a new object and returns a reference to newly created SYBYLAtomTypes object. By default, the following properties are initialized:

```
Molecule = ''
Type = 'SYBYL'
IgnoreHydrogens = 0
```

## Examples:

## As sign Atom Types

```
$SYBYLAtomTypes->AssignAtomTypes();
```

Assigns SYBYL atom types to all the atoms in a molecule and returns SYBYLAtomTypes.

## ${\tt GetAIIPossibleSYBYLAtomTypes}$

Returns all possible SYBYL atom types corresponding to hydrogen and non-hydrogen atoms as an array reference.

 ${\sf GetAllPossibleSYBYLNonHydrogenAtomTypes}$ 

Returns all possible SYBYL atom types corresponding to non-hydrogen atoms as an array reference.

### GetSYBYLAtomTypesData

```
$AtomTypesDataMapRef = $SYBYLAtomTypes->GetSYBYLAtomTypesData();
$AtomTypesDataMapRef = AtomTypes::SYBYLAtomTypes::GetSYBYLAtomTypesData();
```

Returns SYBYL atom types and associated data loaded from SYBYL data file as a reference to hash with the following hash data format:

### StringifySYBYLAtomTypes

```
$String = $SYBYLAtomTypes->StringifySYBYLAtomTypes();
```

Returns a string containing information about SYBYLAtomTypes object.
